## Step by step guide to using **podopro** silicone molding putty

Measure equal quantities of Part PP20-A & Part PP20-B.

After 1-2 minutes an even colour is achieved.

Ensure the orthotic is completely set before attempting to trim.

Final smoothing can be completed using a drill.

Mix both parts together in the hands for 1-2 minutes.

Form the mixture into the appropriately shaped device, and leave in place to set for up to 4 minutes.

Can be trimmed if necessary with a scalpel after setting.

The material is very strong & resists tearing, allowing the user to produce more complicated, longer lasting orthotics.
